Objective:

To understand useRef Hook

Time :30 Minutes

Hands_on: To build a stopwatch application.

- Create a new file named Stopwatch.js.
- Inside Stopwatch.js, define a functional component called Stopwatch.
- Import the necessary hooks: useState and useRef.

Add 3 button for

- startTimer starts the timer by incrementing the time every second.
- stopTimer stops the timer by clearing the interval.
- resetTimer stops the timer and resets the time to zero.
